

Toyota Forklift Parts

Toyota Forklift Part - Ever since 1992, Toyota Material Handling inc., U.S.A., often known as TMHU, continues to be the top selling lift truck provider in the U.S. This company has been situated out of Irvine, California for well over 40 years, providing a complete line of quality lift trucks. With a distinguished reputation of durability and reliability, Toyota lift trucks have thrived in the competitive resources handling market. Quality is the keystone of Toyota's renowned Toyota Production System practiced at all manufacturing facilities, including TIEM, which is stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The bulk of the Toyota lift trucks sold in the U.S. are manufactured here.

Every one of Toyota's manufacturing facilities within Canada and the United States comply with the International Organization for Standardization or ISO 14001 standard. TIEM has been honored many times for its dedication to continuous development, and its environmental methods. It is the first and only maker to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift trucks emit 70 percent fewer smog forming emissions than the current centralized EPA standards and have complied with California's strict emission standards and policies.

TMHU, U.S.A. - Leading the Industry

The head of Toyota Material Handling, U.S.A., Brett Wood feels that TMHU's achievement comes from its commitment to construct high quality lift vehicles at the same time as providing superb client assistance and service. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, often known as TICO, is listed in Fortune Magazine as the world's largest lift truck supplier and is amongst the magazines prestigious World's Most Admired Companies.

New Meaning to Environmental Accountability

Toyota Industries Corporation, as the parent company, has instilled a rich company doctrine of environmental stewardship in Toyota. Not many other organizations and no other lift truck maker can match Toyota's record of protecting the natural environment while concurrently encouraging the economy. Environmental accountability is an important feature of corporate decision making at Toyota and they are proud to be the first and only producer to offer UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift vehicles. Yet another reason they remain a leader within the industry.

Toyota originally released the 8-Series line of lift trucks in 2006, again exhibiting its leadership and innovation in the industry. Featuring an exclusive emission system that eclipsed both Federal EPA emission standards, and California's more environmentally friendly emission standards. The end invention is a lift vehicle that produces 70 percent fewer smog forming emissions than the current Federal standards allow.

Also in 2006, Toyota established a partnership with the Arbor Day Foundation, furthering their obligation to the environment. Greater than 57,000 trees have been planted in regional parks and national forests damaged by environmental causes such as fires, as a result of this relationship. 10,500 seedlings have also been spread through Toyota Industrial Equipment's network of dealers to non-profit organizations and local customers to help sustain communities all over the U.S.

Toyota's lift vehicles offer improved durability, visibility, efficiency, ergonomics, and all the foremost safety technology that has made Toyota an industry leader. The company's System of Active Stability, also called "SAS", helps reduce the chance of incidents and accidental injuries, in addition to increasing productivity levels while minimizing the potential for merchandise and equipment breakage.

System Active Stability senses several aspects that might lead to lateral insecurity and likely lateral overturn. When one of those conditions are detected, SAS instantly engages the Swing Lock Cylinder to steady the rear axle. This transitions the lift truck's stability footprint from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the likelihood of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to prevent injuries or accidents while adding durability.

The SAS systems were initially used on the 7-Series internal combustion lift trucks which were put on the market in 1999. These systems helped boost Toyota into the lead for industry safety standards. Now, SAS is used on practically every modern internal combustion models and is standard equipment for the new 8-Series. There are more than 100,000 SAS-equipped lift trucks in action, exceeding 450 million hours combined. The increased population of SAS-equipped vehicles in the field, along with required operator training, overturn fatalities across all brands have decreased by 13.6% since 1999. Additionally, there has been an overall 35.5% decrease in industry wide collisions, loss of control, falls and overturn from a lift vehicle for the same period.

Toyota's pattern of excellence reaches far beyond its technological achievements. The company maintains an extensive Operator Safety Training program to help clients meet OSHA standard 1910.178. Education programs, video tutorials and an assortment of resources, covering a wide scope of matters-from individual safety, to OSHA regulations, to surface and cargo situations, are available through the supplier network.

Since the sale of its first lift vehicle in the U.S. to the manufacture of its 350,000th lift vehicle produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has maintained a solid presence in the U.S. This reality is demonstrated by the statistic that 99% of Toyota lift trucks bought in America today are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of manufacturing facilities over 126 acres of property.

Facilities include a National Customer Center, as well as manufacturing operations and distribution centers for equipment and service components, with the entire commitment exceeding \$113 million dollars.

The new National Customer Center was conceived to serve both dealers and consumers of TMHU. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an section for live merchandise demonstrations with seating capability for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its originator, Sakichi Toyoda, in 1867, and finally a education center.

TMHU has 68 authorized industrial equipment dealers, along with 189 dealership locations throughout the United States, providing the most complete and inclusive customer support and customer service in the industry. The company's new and Licensed Used lift trucks, service, components, and financing capabilities make Toyota dealerships a one-stop shop to guarantee total customer satisfaction.
